PROFESSIONAL POWER TOOL SOLUTIONS

Next Generation LiHD.

Thanks to new LiHD technology, Metabo is the only manufacturer in the world to cover the entire power range – from 400 to 2,800 Watt – from standard machines to unique system solutions. Applications previously reserved for only the most powerful mains powered machines can now be handled cordlessly.

New 18V LiHD battery packs are now available in 4.0 Ah, 5.5 Ah and 8.0 Ah.

What LiHD battery packs can do:

- You can complete demolition work under full load for 35 minutes when using two 18V LiHD 8.0 Ah battery packs on the KHA 36-18 LTX cordless combination hammer.
- You can screw 100 screws with Ø 8 x 450 mm length into soft wood with one 18V LiHD 8.0 Ah battery pack and the SSW 18 LTX 600 cordless impact wrench with adaptor.
- You can notch a T-beam in 3 minutes when using two 18V LiHD 8.0 Ah battery packs on the WPB 36-18 LTX BL 230 cordless angle grinder.

Powerful

The combination of new high-performance battery cells and completely re-developed components within the LiHD battery pack ensures maximum power availability over an extremely long run time.

Leading technology.

With the new LiHD technology, Metabo achieves new performance levels in cordless machines which are directly comparable to that of corded tools. It is the combination of many different components that offer added power, service life, and runtime. No matter what Metabo battery pack you choose.

More power

With new LiHD cell technology in combination with a newly developed battery pack

- Enlarged power rails and contacts capable of handling high currents
- 3x better conductivity with cell connectors made of a specialized copper alloy

Longer service life

and extreme **ruggedness**:

- Optimal protection against internal contamination with fully encapsulated cast design and full protective coating of electronics, as well as optimal gasket in the cover structure.
- Cells are protected against vibration and thermal damage
- Less frequent charging due to more usable cell energy
- Exterior rubber coating on the battery pack provides a secure and non-slip grip and also serves as shock protection

More runtime

- More active material in the cell
- Less electrical loss through reinforced cell construction
- Use of high quality materials (silver and copper)
